

Meeting Document Summary Sheet

Document Title: Infrastructure Challenges in Chile
Purpose: For information
Issue: Infrastructure-related challenges in Chile and the role of the Council for infrastructure policies (CPI).
Background: <p>Since the 1990s Chile has worked to position itself as a reliable international partner. Thanks to its political stability, responsible macroeconomic management and fiscal discipline, over these past decades, it has consolidated its reputation as a country that inspires investors' confidence. Chile has a risk classification of A+.</p> <p>Given that infrastructure development has played a key role in the expansion of the country, as Chile strives to achieve high-income status, infrastructure will be pivotal. This will require adjustments to how infrastructure is planned and governed. The key role of Chile's infrastructure planning system will be to create an enabling pathway between the present conditions and the desired future state.</p>
Proposal / Recommendations:
Decision Points: Take note.
